**Subject:** Soitec SWPP & list of materials?

Hello Jim,

Thank you for providing the information for the Rugged Solar fencing, which appears to require 68 truck loads of concrete, at 9.5 yards per truck.

I am asking you or other appropriate staff to please direct me to I can find the quantified materials list in the Final EIR, including the following information:

- type and amount of aggregates
- total amount of concrete , and rebar
- amount of DC wire and 35 AC wire
- Itemized list of all materials to be used for Rugged Solar, TDS Solar, and related components such as the batch plant and battery storage system

The list should itemize all the material needed for the complete job start to finish so the public can review the information and determine if the calculations and estimated impacts are accurate or if they need corrections similar to the public comment generated significant increase water use of almost 40%

I am also seeking any information on the RWQCB's General Industrial Permit and Storm Water Prevention Program for Rugged Solar and the proposed batch plant and battery storage system. Those permits and plans should be included in the FEIR for public review and comment. I have messages in to the Colorado Basin RWQCB seeking related information, but have not heard back yet.

Based on our experiences with Hamann Companies, to date, there are also major concerns that the temporary batch plant would later become permanent. After all, Hamann Companies is in the concrete building

/construction business. To date, they have generally been less than honest with the Boulevard Planning Group and neighbors on what their real plans and operations are.

Thank you

Donna Tisdale
